

Dear Customer,

Thank you for choosing the **DUCATI**748R. This model has been developed in cooperation with Ducati Corse with the purpose of creating the best racing motorcycle for the World Supersport Championship.

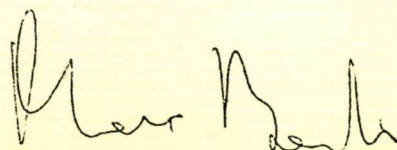

Your **DUCATI**748R differs from the motorcycles that will race in the Supersport Championship in just a few details, so as to allow for road homologation.

With its technical specifications, the **DUCATI**748R is easily singled out among Ducati production motorcycles, and stands up to the 996 used in the World Superbike Championship with such features as:

- Top specific power in the range (standard models)
- Top rpm in the range (standard models)
- Injectors located above the throttles
- Large-capacity air-box accommodating the throttle bodies
- NC-machined combustion chamber
- Oversized cross-section, high-rigidity timing belts
- Clutch featuring an anti-slip mechanism

Of all Ducati models, the **DUCATI**748R comes closest to a racing motorcycle. For this reason it is essential that you strictly follow the instructions and suggestions provided in the Owner's Manual and have the motorcycle serviced at the recommended intervals by our authorized workshops.

For the **DUCATI**748R only, Ducati offers an upgrade kit at a special price. The kit includes silencers with carbon liner and central section with 45/50-mm adapter. Once this kit is installed, the motorcycle can only be used on the track. Please strictly follow the inspection and replacement intervals indicated in the attached sheet for track riding.
